TANISH JASWAL

Data Analyst | Python • SQL • Machine Learning • Dashboards
Punjab, India | +91 88727 94962 | tanishjaswal56@gmail.com | LinkedIn | GitHub

PROFESSIONAL SUMMARY

B.Tech Computer Science student (2027) who builds data-driven products end to end: gather data, analyze it, visualize it and deploy it. Built live analytics dashboards (movie ROI analysis, spending trends), a real-time journaling app with a PostgreSQL backend, and an AWS serverless air-quality alert system for schools. Completed an AI/ML internship. Seeking a Data Analyst internship to turn raw data into decisions.

TECHNICAL SKILLS

Languages: Python, SQL, JavaScript, C, C++

Data Analysis: Pandas, NumPy, Exploratory Data Analysis (EDA), data cleaning & preprocessing, statistics, API data integration

Visualization & BI: Power BI, Excel, Matplotlib, Seaborn, Plotly, Chart.js, interactive dashboards

Machine Learning: Scikit-learn: regression, Random Forest, KNN, Decision Trees, Naive Bayes, SVM, clustering, recommendation systems

Databases & Cloud: PostgreSQL (Supabase), DynamoDB, AWS Lambda, SNS, EventBridge, REST APIs, Flask, React

Tools: Git, GitHub, Jupyter Notebook, pytest, Vercel, VS Code

PROJECTS

CineScope – Movie Analytics & Recommendation Platform | Python, Flask, REST APIs — Live Demo | GitHub

- Combined data from multiple APIs into one view of ratings (IMDb, Rotten Tomatoes, Metacritic), cast, streaming availability and trailers.
- Analyzed movie finances: budget, worldwide and domestic revenue, net profit/loss and ROI %.
- Built 8 REST API endpoints with search and filtering by genre, era, rating, language and sort order; added recommendations and AI summaries (Gemini API).
- Deployed on Vercel with API caching and graceful fallbacks for network and missing-data errors.

ExpenseFlow – Expense Analytics Dashboard | JavaScript, Chart.js, Vite — Live Demo | GitHub

- Built a dashboard showing income, expenses, net balance and savings rate, with 3 chart types (doughnut, bar, line) for category, monthly and daily trends.
- Added budget limits with alerts at 80% and 100%, reports by month, quarter and year, filtering and search, and 7-currency support.
- Added data export to PDF, CSV and JSON for use in other tools.

Daily Ink – Memory Journal (PWA) | React, Vite, Tailwind CSS, Supabase (PostgreSQL) — Live Demo | GitHub

- Built a full-stack journaling app with spaced-repetition reviews (SM-2 style), streak tracking, mood tracking and a calendar view; 21 commits.
- Implemented full-text search with date, mood and task filters, plus real-time sync across devices and tabs.
- Designed a PostgreSQL schema with row-level security, PBKDF2-hashed credentials and an admin login log; installable offline PWA.

School AQI Alert – Air-Quality Alerts for Schools | Python, AWS Lambda, DynamoDB, SNS, EventBridge — GitHub

- Hackathon project (Environmental Hacks IRL, Oct 2026): pulls live AQI and a 7am–4pm forecast from the Open-Meteo API and texts school principals at 6:30 AM with an action, such as cancelling outdoor PT.
- Designed a serverless pipeline with a 7:30 AM escalation to district officers if unconfirmed, English/Hindi alerts, and 19 automated tests.

EXPERIENCE

AI/ML Intern – Netmax, Chandigarh — June 2025 (6 weeks)

- Worked on Python-based data preparation, machine learning experiments and model evaluation during a 6-week internship.
- Documented experiments, methods and findings in clear technical write-ups.

EDUCATION

B.Tech, Computer Science and Engineering – IKGPTU, Kapurthala, Punjab — Expected 2027

Coursework: Data Mining, Machine Learning, Artificial Intelligence, Database Management Systems, Cloud Computing, Compiler Design
